

OBJECTIVE

To control the products supplies and transportation from the countryside to the final consumer's table has become essential to comprehend the good working of supply chains. This post-university training programme is designed to form and help young graduates specialize in food chain management and coordination.

The training provides the following skills:

- **Conceptual skills:** analyze the functioning of the food system and various food chains, observe and analyze the food chains agents' environment, its limits and its assets, national and international regulations defining the socio-institutional framework of food chains, specialize in food supply management and coordination.
- **Practical skills:**
 - to elaborate a strategic diagnosis of an agri-food chain and suggest strategic projects for all the involved agents,
 - to work in multidisciplinary teams and to study the interactions between technical and socio-economic aspects.

MASTER 2 PROGRAMME (60 ECTS)

Unit 1: Food chains: concepts and definitions (September)

- Acquisition of the approaches and methodological tools to master the various uses of the chain concept, value chains and global value chain.
- Analysis of the agri-food markets functioning, particularly within the economic liberalization context.
- Acquisition of the tools for the analysis of coordinating multi-stakeholders methods in companies.

Unit 2: Technical aspects of logistics: new technologies, innovations, transportation cost control (October)

- To learn how to manage the key procedures of a global logistics chain and to optimize partnerships network management.
- To analyse the impact of logistics actions on financial performance.

Unit 3: Legal aspects of logistics: rules, regulations and legal foundations of international logistics (October-November)

- To apprehend the conventions, contracts and standards of international transportation, governing the international logistics networks.

Unit 4: Large retailing sector and food supply chains management (November-December)

- To understand how the different marketing processes work and the role played by the different actors of the economy.
- To learn modern logistics methods to better manage the goods and information flows.
